6.	TOPIC SUB-TOPIC	SET CONCEPTS FINDING THE NUMBER OF ELEMENTS GIVEN SUBSETS <u>Concepts</u> 1. Express the subsets given in powers of 2.				

Examples

1. Set A has 8 subsets, how many elements are in set A?

Soln

$$n(c) = 2^n$$

$$2^n = 8 \text{ subsets}$$

$$2^n = 2 \times 2 \times 2$$

→

$$2^n = 2^3$$

$$\therefore n = 3 \text{ elements}$$

2	8
2	4
2	2
	1

Set Q has 1 subset

Find $n(Q)$

$$2^n = n(C)$$

$$2^n = 1$$

$$2^n = 2^0$$

2. Given that set P has 15 proper subsets, find the number of elements in set P

Soln

$$n(c) = 2^n - 1$$

$$2^n - 1 = 15 \text{ proper subsets}$$

$$2^n - 1 + 1 = 15 + 1$$

$$2^n - 0 = 16$$

$$2^n = 16$$

$$2^n = 2 \times 2 \times 2 \times 2$$

$$2^n \rightarrow 2^4$$

$$\therefore n = 4 \text{ members}$$

EVALUATION

EXERCISE

1. Given the following subsets, find the number of elements each set:

a) $X = 4 \text{ subsets}$

$$Y = 16 \text{ subsets}$$

$$Z = 32 \text{ subsets}$$

$$W = 64 \text{ subsets}$$

$$V = 128 \text{ subsets}$$

b) $A = 3 \text{ proper subsets}$

$$B = 7 \text{ proper subsets}$$

$$C = 31 \text{ proper subsets}$$

$$D = 63 \text{ proper subsets}$$

		<u>Answers</u> a) $X = \underline{2 \text{ members}}$ $Y = \underline{4 \text{ members}}$ $Z = \underline{5 \text{ members}}$ $W = \underline{6 \text{ members}}$ $V = \underline{7 \text{ members}}$ b) $A = \underline{2 \text{ elements}}$ $B = \underline{4 \text{ elements}}$ $C = \underline{5 \text{ elements}}$ $D = \underline{6 \text{ elements}}$

7.	TOPIC SUB-TOPIC	SET CONCEPTS REPRESENTING INFORMATION ON A VENN DIAGRAM <u>Concepts</u> 1. Summarize the statements given. <u>Examples</u> (i) In a group of 12 pupils, 8 pupils got pens (P) and 7 pupils got books (B). a) Show this information on a Venn diagram. Soln $n(E) = 12, n(P) = 8, n(B) = 7$ $n(P \cap B) = ?$ <u>Venn diagram.</u> $E = 12$ <div data-bbox="420 1348 730 1619" data-label="Diagram"> </div> b) From the Venn diagram above. Find the value of m.				

Soln

$$(8 - m) + m + (7 - m) = 12$$

$$8 + 7 + m - m - m = 12$$

$$15 - m = 12$$

$$15 - 15 - m = 12 - 15$$

$$0 - m = -3$$

$$-m = -3$$

$$\frac{-m}{-1} = \frac{-3}{-1}$$

$$M = 3 \text{ pupils}$$

c) How many pupils got only one type of stationery?

Soln

$$\text{Only one} = (8 - m) + (7 - m)$$

$$= (8 - 3) + (7 - 3)$$

$$= 5 + 4$$

$$\underline{= 9 \text{ pupils}}$$

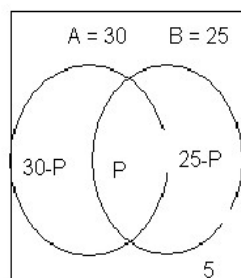

2. Given that $n(A) = 30$, $n(B) = 25$, $n(A \cup B) = 45$ and $n(A \cap B)^c = 5$

a) Show this on a Venn diagram.

Soln

Let P be $n(A \cap B)$

$$n(\epsilon) = 45$$

b) Find the elements in $A \cap B$.

		<p>Soln</p> $30 + p + p + 25 - p + 5 = 45$ $30 + 25 + 5 - p = 45$ $60 - p = 45$ $60 - 60 - p = 45 - 60$ $0 - p = -15$ $-p = -15$ $-1(-p) = -1(-15)$ <p><u>$\therefore P = 15$ elements</u></p> <p>c) How many elements are in at least one set only?</p> <p>Soln</p> $\begin{aligned} \text{At least one} &= (30 - p) + p + (25 - p) \\ &= (30 - 15) + 15 + (25 - 15) \\ &= 15 + 15 + 10 \\ &= 30 + 10 \\ &= 40 \text{ pupils} \end{aligned}$ <p><u>$= 40$ pupils</u></p>

Conversions

a) HINDU TO ROMAN

Concepts:

- Expand in value form.
- Write each expanded in Roman form.
- Write a bar on top which means multiply by 1000.

e.g

1. Write in Romans 1962

Soln

$$1962 = 1000+900+60+2$$

$$1962 = M+CM+LX+II$$

$$\therefore 1962 = \underline{\text{MCMLXII}}$$

2. What is 6000 in Romans?

Soln

$$6000 = 6 \times 1000$$

$$\begin{array}{c} \text{—} \\ = \text{VI} \end{array}$$

b) ROMANS TO HINDU ARABIC

Concepts:

- (i) Expand in Roman form.
- (ii) Write each expanded in Hindu-Arabic

Eg.

- (i) Write CXCV in Hindu – form.

$$\begin{array}{rcl} \text{Soln} & & 100 \end{array}$$

$$\text{CXCV} = \text{C} + \text{XC} + \text{V} \quad 90$$

$$= 100+90+5 \quad 5$$

$$= \underline{195} \quad \underline{195}$$

- (ii) Write XV in Hindu-Arabic form

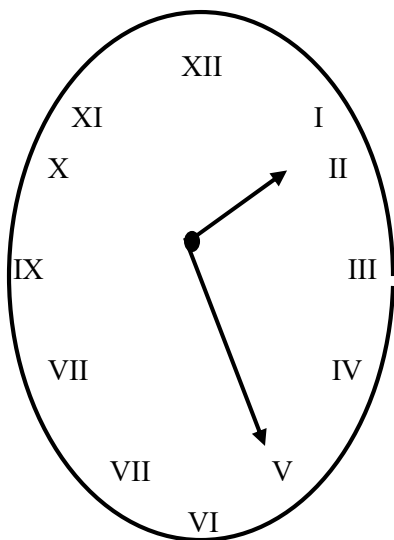

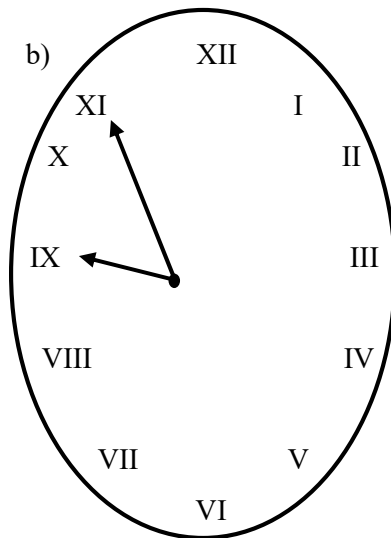

Soln

$$\begin{array}{c} \text{—} \\ \text{XV} \end{array} = \text{XV} \times 100$$

$$= 15 \times 1000$$

$$= \underline{15,000}$$

2.

	Base	Name	Digits
1	Two	Binary	= {0, 1}
2	Three	Ternary	= {0, 1, 2}
3	Four	Quarterly	= {0, 1, 2, 3}
4	Five	Quaternary	= {0, 1, 2, 3, 4}
5	Six	Senary	= {0, 1, 2, 3, 4, 5}

8	Nine	Nonary	= {0, 1, 2, 3, 4, 5, 6, 7, 8}
9	Ten	Denary / Decimal	
		Ordinary / mother	= {0, 1, 2, 3, 4, 5, 6, 7, 8, 9}

CONVERSIONS:

a) TO BASE TEN

Concepts:

- Give the number the powers.
- Expand the number in the given base.
- Express each bracket in multiplication form.
- Get the value of each bracket then add.

Examples:

1. Express 1010_{two} in base ten.

Soln

$$1010_{\text{two}} = 1010$$

$$1010_{\text{two}} = (1 \times 2) + (0 \times 2) + (1 \times 2) + (0 \times 2)$$

$$1010_{\text{two}} = (1 \times 2 \times 2 \times 2) + (0 + 2 \times 2) + (1 \times 2) + (0 \times 1)$$

$$1010_{\text{two}} = 8 + 0 + 2 + 0$$

$$\therefore \underline{\underline{1010_{\text{two}} = 10_{\text{ten}}}}$$

2. Convert 103_{four} to decimal base

Soln

$$\begin{aligned}
 103_{\text{four}} &= 1 \ 0 \ 3 \\
 &\quad \quad \quad \begin{array}{l} \text{Ones} \\ \text{Four} \\ \text{Four - fours} \end{array} \\
 &= (1 \times 4 \times 4) + (0 \times 4) + (3 \times 1) \\
 &= 16 + 0 + 3 \\
 &= 19
 \end{aligned}$$

Ten

b) FROM BASE TEN TO ANY BASE.

Concepts.

- Divide the number in base ten by the required base only till the result is less than that base.
- Record the remainders from the bottom upwards as the answer (required base).

Examples

1. Convert 33 to binary system.

Soln

33_{ten}	Base	N0.	Rem
	2	33	R
	2	16	1
	2	8	0
	2	4	0
	2	2	0
		1	0

$$\therefore 33_{\text{ten}} = \underline{100001}_{\text{two}}$$

OR

$$\begin{aligned}
 33_{\text{ten}} &= (11)(11)(11)(11)(11)(11)(11)(11)(11)(11)(11)(11)(11)(11)(11) \\
 &= 16 \text{ groups of } 2 \text{ rem. } 1
 \end{aligned}$$

$$\begin{aligned}
 16_{\text{ten}} &= (11)(11)(11)(11)(11)(11)(11)(11) \\
 &= 8 \text{ groups of } 2 \text{ rem. } 0
 \end{aligned}$$

$$8_{\text{ten}} = 4 \text{ groups of } 2 \text{ rem. } 0$$

2. Whole numbers

These are numbers which start from zero.

$X = \{\text{whole numbers greater than 5 but less than 10}\}$

Soln

$X = \{6, 7, 8, 9\}$

3. Even numbers

These are whole numbers which are completely divisible by 2.

Note

How are even numbers obtained?

Concepts

- a) When a whole number is multiplied by 2/ doubled you get an even number

Eg

$$0 \times 2 = \underline{0}$$

$$2 \times 2 = \underline{4}$$

$$4 \times 2 = \underline{8}$$

$$1 \times 2 = \underline{2}$$

$$3 \times 2 = \underline{6}$$

$$5 \times 2 = \underline{10}$$

Order of even numbers = $\{0, 2, 4, 6, 8, 10, \dots\}$

- b) When any two even numbers are added, the result is an even number.

Eg. $2 + 4 = \underline{6}$

$$0 + 8 = 8$$

- c) When any two even numbers are multiplied, the result is an even number.

Eg. $0 \times 6 = \underline{0}$

$$2 \times 8 = \underline{16}$$

NB formular for even numbers = " $2n$ "

4. Odd numbers

These are whole numbers which are not completely divisible by 2.

Note:

How do we get odd numbers?

- a) When a whole number is multiplied by 2 then add 1 to the result, you get an odd number.

OR add 1 to an even number

Formular = " $2n + 1$ "

e.g $(0 \times 2) + 1 = \underline{1}$

$$(1 \times 2) + 1 = \underline{3}$$

$$(2 \times 2) + 1 = \underline{5}$$

Order of odd numbers = $\{1, 3, 5, 7, 9, \dots\}$

b) When any two odd numbers are multiplied, the result is an odd number.

Eg. $1 \times 3 = \underline{3}$

$$3 \times 5 = \underline{15}$$

$$5 \times 7 = \underline{35}$$

c) When any odd number is added to any even number, the result is an odd number.

Eg. $1 + 2 = \underline{3}$

$$2 + 3 = \underline{5}$$

$$4 + 5 = \underline{9}$$

Note:

❖ When any odd number is subtracted from any odd number, the result is an even number.

Eg. $0 \times 1 = \underline{0}$

$$2 \times 3 = \underline{6}$$

$$5 \times 4 = \underline{20}$$

❖ When any odd number is subtracted from any odd number, the result is an even number.

Eg. $3 - 1 = \underline{2}$

$$7 - 3 = \underline{4}$$

$$15 - 7 = \underline{8}$$

5. Prime numbers:

These are numbers which have only 2 factors ie one and itself.

• Order of prime numbers = $\{\underline{2, 3, 5, 7, 11, 13, 17, 19, 23, 29, \dots}\}$

6. Composite number.

These are numbers with more than two factors. (opposite of prime numbers) order of

composite numbers = $\{\underline{4, 6, 8, 9, 10, 12, 14, 15, 16, \dots}\}$

7. Square numbers:

- These are numbers got by multiplying a number by itself / squaring a number.

e.g $1^2 = 1 \times 1 = \underline{1}$

$$2^2 = 2 \times 2 = \underline{4}$$

$$3^2 = 3 \times 3 = \underline{9}$$

- Square numbers are also got by adding consecutive odd numbers from 1.

e.g $1 = 1$

$$1 + 3 = 4$$

$$1 + 3 + 5 = 9$$

$$1 + 3 + 5 + 7 = 16$$

- Order of square numbers = $\{1, 4, 9, 16, \dots\}$

		<p>8. <u>Triangular numbers:</u></p> <p>These numbers are got by adding consecutive counting numbers from 1.</p> <p>Eg $1 = \underline{1}$</p> <p>$1+2 = \underline{3}$</p> <p>$1+2+3 = \underline{6}$</p> <p>$1+2+3+4 = \underline{10}$</p> <p>$1+2+3+5 = \underline{15}$</p> <p>- Order of triangular numbers = {1, 3, 6, 10, 15,}</p> <p>9. <u>Cube numbers</u></p> <p>These are numbers obtained by multiplying counting number by itself three times / cubing a number.</p> <p>Eg. $1^3 = 1 \times 1 \times 1 = \underline{1}$</p> <p>$2^3 = 2 \times 2 \times 2 = \underline{8}$</p> <p>$3^3 = 3 \times 3 \times 3 = \underline{27}$</p> <p>$4^3 = 4 \times 4 \times 4 = \underline{64}$</p> <p>- Order of cube number = {1, 8, 27, 64,}</p> <p>10. <u>Integers:</u></p> <p>These are a combination of negatives, positives with zero.</p> <p>Eg. -ve integers = {-2, -1}</p> <p>+ve integers = {+2, +1}</p> <p>With zero = {-2, -1, 0, 1, 2,}</p> <p>11. <u>Rational numbers:</u></p> <p>These are numbers which can be written as fractions / they are the same as fractions e.g = $\{1/2, 2/9, 3/4, \dots \dots \dots\}$</p>

- Matovu had 3 children. He left dollars 78,240 to them when he died. If the children shared the money equally, how much money did each child get?
- In a district, there are 26,688 pupils in the district. If each school had the same number of children, find the number of children in each school.
- During the tree planting season, 27,045 young trees were shared equally among 621 schools. How many trees did each school get?

2. Cube numbers

Got by multiplying a number by itself three time.

e.g

find the next number in the sequence below

1, 8, 27, 64, 125, -----

Soln

1, 8, 27, 64, 125, 216

1^3 2^3 3^3 4^3 5^3 6^3

$$1 \times 1 \times 1 = 1$$

$$2 \times 2 \times 2 = 8$$

$$3 \times 3 \times 3 = 27$$

$$4 \times 4 \times 4 = 64$$

$$5 \times 5 \times 5 = 125$$

The next N0: = $6 \times 6 \times 6$

$$= \underline{\underline{216}}$$

3. Triangular numbers

NB

These are got by adding consecutive counting numbers starting from one. E.g. Find the next number in the sequence below. 1, 3, 6, 10, 15, 21, -----

Soln

1, 3, 6, 10, 15, 21, ---

1, \uparrow 3, \uparrow 6, \uparrow 10, \uparrow 15, \uparrow 21, \uparrow 28

$$1 + 2 = 3$$

$$3 + 3 = 6$$

$$6 + 4 = 10$$

$$10 + 5 = 15$$

$$15 + 6 = 21$$

Divisibility test for 2

A number is divisible by 2 if it ends with an even digit.

For example

42

42 is divisible by 2 since it ends with an even digit.

Exercise

1. Which of the following numbers is divisible by 2?

4 6 3, 5 4 2, 8 6 0, 9 5 1

2. Without dividing, which number is divisible by 2?

Divisibility tests for 3

A number is exactly divisible by 3 if the sum of its digits is divisible by 3.

For Example

33; Is divisible by 3 since its sum i.e $3 + 3 = 6$ is divisible by 3.

Exercise

- Which of the following numbers is divisible by 3?
- 30, 32, 35, 37, 39
- Without dividing, which number is divisible by 3?
- 76 or 72
- 96 or 94

Divisibility test for 4

A number is divisible by 4 if its last two digits are zero or multiples of 4

For example

356

356 is divisible by 4 since its last two digits are multiples of 4.

Exercise

- Which of the following numbers are divisible by 4?
10, 185, 949, 3700, 444
- Without dividing, which number is divisible by 4?

3. Divisibility test for 7.

Concepts.

When the last digit of a number is doubled and when the result is subtracted from the remaining number is divisible by 7.

e.g Is 861 and 1792 divisible by 7?

Soln

$$86(1) = 1+1$$

$$86 = 2$$

$$86 = 86 - 2$$

$$= \underline{84} \text{ (Divisible by 7)}$$

Activity

1. Which of the following numbers is divisible by 7?

- 14, 16, 21, 25, 28

2. Without dividing, which number is divisible by 7

- 100 or 91
- 112 or 107
- 63 or 79
- 36 0r 56

NB. For big N0's repeat the procedure till you get a small number.

$$179 (2) = 2+2$$

$$= \underline{4}$$

$$179 = 179 - 4$$

$$= \underline{175}$$

$$17 (5) = 5+5$$

$$17 = \underline{10}$$

$$= \underline{7} \text{ (divisible by 7).}$$

\therefore 861 and 1792 are all divisible by 7.

Date	Class	Time	Subject	No. of pupils

4. Divisibility test for 8:

Concepts:

A number is divisible by 8 if the number formed by the last 3 digits is also divisible by 8.

e.g check whether 7.960 and 5788 is divisible by 8.

Soln

$$7 (960) = \underline{960}$$

$$8$$

$$= \underline{120} \text{ (divisible)}$$

$$\underline{188}$$

$$8$$

$$= \underline{23 \frac{1}{2}} \text{ (Not divisible)}$$

\therefore 7960 is divisible by 8 but not 5188.

Activity

1. Which of the following numbers is divisible by 8

- 135, 144, 400, 500, 600, 960, 188

2. Without dividing, which number is divisible by 8

Date	Class	Time	Subject	No. of pupils

5. Divisibility test for 9.

Concepts

- A number is divisible by 9 if the sum of its digits is divisible by 9.

e.g take 198 to see whether its divisible by 9.

Soln

$$198 = 1 + 9 + 8$$

$$= 10 + 8$$

$$= \underline{18} \text{ (divisible by 9)}$$

\therefore 198 is divisible test for 9

Activity

6. Divisibility test for 11

Concepts.

- A number is divisible by 11 if the difference between the sum of the digits in the even places and that of the digits in the odd places stating with odd zero or divisible by 11.

Examples.

1. Check whether 733689 and 676390 are divisible by 11.

Soln

Odd places starts from the last digit while even places start from the second last digit.

- a) even position

7 3 3 6 8 9

odd position

(i) sum in odd position = $7 + 3 + 8$
