**Based on, best for sciences**

We are accustomed to writing numbers in base ten, using the symbols for 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9 probably because we have 10 fingers. For example, 75 means 7 tens and five units. However numbers can be written in any number base.

### Example 1

Change 75 base ten to base eight

$$75_{\text{ten}} = 113_{\text{eight}}$$

8	75	R
8	9	3
	1	1

### Example 2

Change 113<sub>eight</sub> to base 10

$$\begin{aligned} 113_{\text{eight}} &= [(1 \times 8^2) + (1 \times 8^1) + (3 \times 8^0)]_{\text{ten}} \\ &= (1 \times 64) + (1 \times 8) + (3 \times 1) \\ &= 64 + 8 + 3 \\ &= 75 \end{aligned}$$

Therefore, if we use base 8 instead of base ten, then 75 is written as 113 which denotes one sixty-four ( $8^2$ ), one eight ( $8^1$ ) and 3 units (instead of hundreds, tens and units).

Base 2 is particularly useful as it only requires two symbols, for zero and one, and it is the way numbers are represented in computers.

### Example 3

Change  $75_{\text{ten}}$  to base 2

2	75	R
2	37	1
2	18	1
2	9	0
2	4	1
2	2	0
	1	0

Thus,  $75_{\text{ten}} = 1001011_{\text{two}}$

Just as, in base ten, the columns represent powers of 10 and have 'place value' 1, 10,  $10^2$ ,  $10^3$  etc. (reading from right to left), so in base 2, the columns represent powers of 2. Hence the number 1001011 denotes (reading from right to left):

1 unit ( $2^0$ ), 1 two ( $2^1$ ), no fours ( $2^2$ ), 1 eight ( $2^3$ ), no sixteens ( $2^4$ ), no thirty-twos ( $2^5$ ), 1 sixty-four ( $2^6$ ).

The number 1001011 in base 2 is the same as the number 75 in base ten.

### Example 4

Change  $75_{\text{ten}}$  to base five

5	75	R
5	15	0
	3	0

Thus,  $75_{\text{ten}} = 300_{\text{five}}$

We use the symbols 0, 1, 2, 3 and 4 to represent numbers in base 5. The columns in base 5 have 'place value' 1, 5, 25, 125, 625 etc. reading from right to left. The number 75 in base ten is the same as the number 300 in base five, that is 3 twenty-fives, no fives and no units.

### Example 5

Change  $203_{\text{six}}$  to base ten

$$203_{\text{six}} = [(2 \times 6^2) + (0 \times 6^1) + (3 \times 6^0)]_{\text{ten}}$$

$$= [2 \times 36 + 0 + 3 \times 1]_{\text{ten}}$$

$$= 72 + 3 = 75_{\text{ten}}$$

Writing the number 75 in base six we get 203, which represents 2 thirty-sixes, no sixes and 3 units.

We have seen that 75 (base10), 1001011 (base 2), 300 (base 5), 113 (base 8), and 203 (base 6) all represent the same number.

Similarly, we can write 75 in any base we choose and we can write all numbers in any base.

### Revision questions

1. Subtract  $1101_{\text{two}} - 110_{\text{two}}$ .

2. Change  $72_{\text{ten}}$  to binary

3. Express  $45_{\text{ten}}$  to binary

4. Write:  $21_{\text{ten}}$  in base two

5. Change  $1010_{\text{two}}$  to base ten

6. Add:  $101_{\text{two}} + 11_{\text{two}}$

8. Change  $110_{\text{two}}$  to base ten.

9. Change 3 to binary system.

10. Work out:

11. Work out:  $110_{\text{two}} \times 11_{\text{two}}$

12. Change  $11010_{\text{two}}$  to base ten.

13. Change  $1011_{\text{two}}$  to base ten

(2marks)

14. Change  $11011_{\text{two}}$  to base ten.

15. Work out:  $1101_{\text{two}} + 111_{\text{two}}$

16. Work out:  $110_{\text{two}} \times 11_{\text{two}}$

17. (a) Write the place value of 2 and 1 in  $201_{\text{three}}$  (02 mark)

(b) Work out:  $42_{\text{five}} \times 21_{\text{five}}$  (02 marks)

18. (a) work out  $333_{\text{five}} + 123_{\text{five}}$  (02 marks)

(b) Given that  $34_t = 112_{\text{four}}$ , find the value of  $t$

(03marks)

## Suggested answers

1. Subtract  $1101_{\text{two}} - 110_{\text{two}}$ .

$1101_{\text{two}}$

$-110_{\text{two}}$

$111_{\text{two}}$

Or

First change the numbers to base ten, subtract the numbers and then change the answer to base two.

$$1101_{\text{two}} = (1 \times 2^3) + (1 \times 2^2) + (0 \times 2^1) + (1 \times 2^0) = 13$$

$$-110_{\text{two}} = (1 \times 2^2) + (1 \times 2^1) + (0 \times 2^0) = -6$$

$$= 7_{\text{ten}}$$

Converting 7 to base two

2	7	R
2	3	1
2	1	1
	0	1

Hence,  $1101_{\text{two}} - 110_{\text{two}} = 111_{\text{two}}$

2. Change  $72_{\text{ten}}$  to binary

2	72	r
2	36	0
2	18	0
2	9	1
2	4	0
2	2	0
2	1	

thus  $72_{\text{ten}} = 100100_{\text{two}}$

3. Express  $45_{\text{ten}}$  to binary

2	45	R
2	22	1
2	11	0
2	5	1
2	2	1
2	1	0

$$45_{\text{ten}} = 101101_{\text{two}}$$

4. Write:  $21_{\text{ten}}$  in base two

2	21	R
2	10	1
2	5	0
2	2	1
	1	0

$$21_{\text{ten}} = 10101_{\text{two}}$$

5. Change  $1010_{\text{two}}$  to base ten

$$\begin{aligned}
 1010_{\text{two}} &= (1 \times 2^3) + (0 \times 2^2) + (1 \times 2^1) + (0 \times 2^0) \\
 &= 8 + 0 + 2 + 0 \\
 &= 10
 \end{aligned}$$

6. Add:  $101_{\text{two}} + 11_{\text{two}}$

$$101_{\text{two}}$$

$$+ 11_{\text{two}}$$

$$\hline 1000_{\text{two}}$$

7. Change  $110_{\text{two}}$  to base ten.

$$\begin{aligned}
 110_{\text{two}} &= (1 \times 2^2) + (1 \times 2^1) + (1 \times 2^0) \\
 &= 4 + 2 + 0 \\
 &= 6
 \end{aligned}$$

8. Change 3 to binary system.

2	3	r
	1	1

$$\therefore 3_{\text{ten}} = 11_{\text{two}}$$

9. Work out:

$$\begin{array}{r} 1010_{\text{two}} \\ + 111_{\text{two}} \\ \hline 11_{\text{two}} \end{array}$$

10. Work out:  $110_{\text{two}} \times 11_{\text{two}}$

$$\begin{array}{r} 110 \\ \times 11 \\ \hline 110 \\ 110 \\ \hline 10010 \end{array}$$

11. Change  $11010_{\text{two}}$  to base ten.

$$\begin{aligned} 1^4 1^3 0^2 1^1 0^0_{\text{two}} &= 1 \times 2^4 + 1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 0 \times 2^0 \\ &= 16 + 8 + 0 + 2 + 0 \\ &= 26_{\text{ten}} \end{aligned}$$

12. Change  $1011_{\text{two}}$  to base ten

(2marks)

$$(1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0) = (8 + 0 + 2 + 1) = 11$$

13. Change  $11011_{\text{two}}$  to base ten.

$$\begin{aligned} 1^4 1^3 0^2 1^1 1^0_{\text{two}} &= 1 \times 2^4 + 1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0 \\ &= 16 + 8 + 0 + 2 + 1 \\ &= 27 \end{aligned}$$

14. Work out:  $1101_{\text{two}} + 111_{\text{two}}$

$$\begin{array}{r} 1101_{\text{two}} \\ + 111_{\text{two}} \\ \hline 10100 \end{array}$$

15. Work out:  $110_{\text{two}} \times 11_{\text{two}}$

$$\begin{array}{r} 110 \\ \times 11 \\ \hline 110 \\ 110 \\ \hline 10010 \end{array}$$

16. (a) Write the place value of 2 and 1 in  $201_{\text{three}}$  (02 mark)

Place value of 2 =  $2 \times 3^2 =$  or 2nines

Place value of 1 =  $1 \times 3^0$  or 1 unit

(b) Work out:  $42_{\text{five}} \times 21_{\text{five}}$  (02 marks)

$$\begin{array}{r} 42 \\ \times 21 \\ \hline 42 \\ 134 \\ \hline 1432_{\text{five}} \end{array}$$

17.(a) work out (02 marks)

$$\begin{array}{r} 333_{\text{five}} \\ + 123_{\text{five}} \\ \hline 1011_{\text{five}} \end{array}$$

(b) Given that  $34_t = 112_{\text{four}}$ , find the value of t (03marks)

$$34_t = 112_{\text{four}}$$

$$8. \text{ It implies that } 3t^1 + 4t^0 = 1 \times 4^2 + 1 \times 4^1 + 2 \times 4^0$$

$$3t + 4 = 16 + 4 + 2$$

$$3t = 18$$

$$t = 6$$
